"Lean solutions interest me."

Brief Portrait Noventa AG

Noventa AG is an owner-managed technology company headquartered in the St. Gallen Rhine Valley with additional locations in Romania and Thailand. Since 1994, the company has specialised in the development and manufacture of plastic components, functional assemblies and complete product systems. With a dedicated team of around 800 employees who strive for the highest quality and future-oriented solutions in a family atmosphere, Noventa offers customers from a wide range of industries comprehensive services along the entire value chain.

First aid redefined: Noventa AG optimises first aid stations in the workplace with the professional first aid system flawa iQ

As the manufacturer of the intelligent first aid system flawa iQ, we are pleased to announce the successful implementation of our technology at Noventa AG and its subsidiary Noventa Tooling AG.

When it came to choosing a modern and efficient first aid system, Noventa opted for flawa iQ. With this system, the company replaces its previous emergency cases and creates significant added value in terms of process optimisation and safety.

Traditional first aid stations: A capacity bottleneck

René Röckle, responsible for processes at Noventa AG, confirms: "In large and spatially dispersed companies, it is a challenging task to effectively organise and coordinate first

aid measures and stations". With flawa iQ, Noventa can now master this challenge.

Automation and optimisation with flawa iQ replaces time-consuming manual processes

Thanks to flawa iQ, processes such as checking the shelf life of materials and ordering replacement materials are automated. In addition, the system enables effective documentation and tracking of workplace accidents. This information can provide valuable insights into safety issues and support the prevention of occupational accidents. Our intelligent solution greatly simplifies and optimises the management of first aid kits. With automatic reordering and electronic shelf-life monitoring, first aid kits are always ready to use and do not contain expired products.

Conclusion: flawa iQ is an investment in safety and efficiency

"The implementation of flawa iQ at Noventa was a decisive step towards improving our safety standards and our response time in emergencies. The benefits range from reducing logistics and storage costs to increasing the safety culture among our employees. In particular, the ability to reliably document and trace accidents has been of great benefit to our company," emphasises René Röckle.

We at flawa iQ are proud to support companies like Noventa in optimising their processes and at the same time increasing safety at work. With flawa iQ we are setting new standards in first aid and are pleased to be part of this important development.
